NTSafetySolutions

The NewTec complete package for functionally safe solutions

Safe Products – fast and efficient

Managing risks, ensure safety, manage SIL

Manufacturers are increasingly being required to provide proof that a product is safe and that all relevant development standards are met. With NewTec as partner, you develop products that correspond with the latest safety standards – and that efficiently and reliably at a very competitive price.

Whether it be large technical facilities, automobiles, aircraft or medical devices – technical products are becoming increasingly complex. The potential sources for failures and malfunctions multiply accordingly. In order to prevent injury to persons and damage to the environment and equipment, as well as minimise the liability risks, the systems need to be designed in such a manner as to reduce the technical malfunctions and failures as much as possible, and in the case of non-avoidable errors and malfunctions, the dangers need to be excluded completely.

Benefit from our expertise: NewTec provides you a package of services, products and training-seminars offers for everything to do with functionally safe systems. We ensure that your product development corresponds with all branchspecific standards, as well as the comprehensively applicable safety standard IEC 61508.

The benefits for you:

Strengthening your market position through innovation and technology impulses from NewTec

Faster product launching and reduced development costs thanks to a wide-ranging NewTec expertise

Risk minimisation thanks to maximum transparency, integration in your processes and successful project management

High safety competence when it comes to dealing with development processes and global safety standards

NewTec

NewTec is a leading design house providing customised system and product solutions in medical technology, industrial systems, automotive & transportation: NewTec provides guidance to its customers throughout the product lifecycle. The team of experts develops electronic products from the conceptual idea to industrialisation, including licensing.

Founded in 1986, NewTec looks back on more than three decades of project experience in developing complex hardware and software systems with a focus on functional safety and embedded security. NewTec aims to ensure the safety-relevant functionality of a system at all times as well as to protect embedded systems from sabotage attacks and manipulations from the outside.

Today, NewTec has more than 180 employees at five locations in Pfaffenhofen/Roth, Freiburg, Mannheim, Friedrichshafe, Bremen and Taipei/Taiwan.
